

## **For your information: New types of waste in your underground recycling system**

Retura Iris wishes to enable our customers to recycle as much of their waste as possible. We strive to reach Bodø Municipality's environmental and climate goals. One of them is to regain 70 % of the waste materials into new products through recycling.

We therefore facilitate for better recycling of food waste, plastic waste, and glass and metal packaging.

Your new recycling system will include:

**Glass and metal packaging (Duo input)**

**Food waste – New! (Duo input)**

**Plastic packaging – New!**

**Paper**

**Residual waste**

**How to use a duo container:**

- Please note the symbols on the inputs and insert the waste bags on the right side.
- Glass and metal packaging should be inserted without wrapping - this means: no plastic bags. Please insert packaging only, not drinking glasses, saucepans etc. that is not packaging.
- For food waste please use degradable bags only ("biopose"). Regular plastic bags are not degradable. It is important not to contaminate the composting process.

**Container for plastic waste (New!):**

- Plastic packaging can be inserted without wrapping or in plastic bags.
- Large waste bags (240 l) may get stuck, please use regular plastic bags or small waste bags.

We hope the the recycling system will meet your expectations. If there are questions, please contact us per phone: (+47) 75 50 75 60.

Kind regards, Retura Iris AS
